

HackSoc <> School of Computer Science

Minutes for June 17, 2019

Present: Max Willson (Chair), Christian Wagner, Mike Pound, Tim Miller, Hani Momenmia, Aaron Osher, Primoz Fabiani

HackSoc & Cyber Security in 2019/20

1. Activities that Hani Would Like to do in 2019/20

- More Workshops

- Capture the Flag Competitions

- Cyber Team¹ (referred to as the Cyber Sub Group in the Constitution)

2. Capture The Flag Competition

- Hani recommends running everything in Docker containers to ensure the sandbox environment is easily isolated

- Wants to use Hack the Box or similar

- Won't work because: The network blocks the ports required to use external services

- They have dedicated servers that Universities can use²

- To get access to the platform, there is paper work that the University needs to fill out

- Hack the Box has access to servers in browser

- It's reasonable for HackSoc to run a Hack the Box CTF event, a proposal (date, resources needed etc.) would need to be shared with the School and Information Services

- Spoke with Mark Goodwin at Mozilla about CTFs that used to run

- Mozilla said they could sponsor any CTFs

- Also spoke with Microsoft about this

- Wants to create a platform that allows challenges to be created and run in Docker Containers

- Will take approx. 1 year to develop

- Could be created as a Level 2 Group Project

- Should it become a group project, a sponsor (perhaps Mozilla) would have to exist

- Said project needs to have some sort of a written proposal/specification

- Is working with Derby Uni and NTU Students

3. Workshops

- Wants workshops to compliment the skills needed to participate in the CTFs

¹The Cyber sub-group shall be a group of members with an exceptional interest in cybersecurity and penetration testing, led by the Cyber Security Secretary, that are committed to competing in CTF competitions, as well as attending conferences and meet-ups.

4. Cyber Team

No issue raised with respect to taking people to events - SU is the main PoC

Don't mention "Penetration Testing" to Information Services

Unlikely to have any issues with doing Penetration Testing

5. Christian is working with the NCSC³ on vulnerability testing

Can potentially reach out to help support events and strengthen training that we can do

6. Primary contacts when getting stuff approved

Information Services (IS)

School can potentially facilitate communicating with them

Likely to not always be the most friendly with respect to working with HackSoc, especially considering they're constantly stressed with ensuring up time of systems

Research Systems Team (RST)⁴

We should create a ethics agreement

7. School's Cyber Security Lab/Activites

Having an isolated subnet or dedicated network

HackSoc to share what we'd like to have in a Cyber Security Lab

Could potentially expand on top of the labs done in G53SEC

Mike will provide a list of labs done in G53SEC

8. Future Liaising between HackSoc and the School

Future proposals for events would need to be passed via Max, and then would be communicated to the appropriate individuals

³National Cyber Security Centre

⁴School of Computer Science's Dedicated IT Team
